                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          33;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 198;
Sequence 14, Application US/08867471

Sequence 14, Application US/08867471

Patent No. 587226

GENERAL INFORMATION:

APPLICANT: Nathans, Jeremy
APPLICANT: Smallwood, Philip M.
APPLICANT: Macke, Jennifer P.
TITLE OF INVENTION: FIRRORROBLAST GROWTH FACTOR HOWOLOGOUS
TITLE OF INVENTION: FACTOR-1 (FHF-1) AND METHODS OF USE
NUMBER OF SEQUENCES: 15
CORRESPONDENCE ADDRESS:
ADDRESSEE: Fish & Richardson P.C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 10, Application US/08438439C
Patent No. 5876967

Patent No. 6504530

GENERAL INFORMATION:

APPLICANT: Thomason, Arlen

TITLE OF INVENTION: Fibroblast Growth Factor-Like Polypeptides

TITLE OF INVENTION: Fibroblast Growth Factor-Like Polypeptides

FIER REFERENCE: 99-371

CURRENT APPLICATION UMBER: US/09/390,207

CURRENT FILING DATE: 1999-09-07

NUMBER OF SEQ ID NOS: 41

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 4

LENGTH: 210
                                                                                                                                                                                                                       .

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                               ......SSDPLSMVGPSQGRSPSYAS 209

inhibiting the proliferation of normal human dermal fibroblast cells. PRO polypeptides such as PRO6004, PRO4981, PRO7174, PRO5778, PRO4332, etc., are useful for detecting the presence of tumour in a mammal which are useful for detecting the presence of tumour in a mammal which involves comparing the level of expression of the above PRO polypeptides in a test sample of cells taken from the mammal, and a control sample of normal cells of the same cell type, where a higher level of expression of the PRO polypeptides in the test sample as compared to the control sample of is indicative of the presence of tumour in the mammal. The tumour is lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or useful as molecular weight markers for tissue cyping, or as therapeutic agents. A polynucleotide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful configuration animals or knock-out animals which are useful configuration animals or knock-out animals which are useful especial for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and transmembrane PRO polypeptide. \$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$**\$\$\$**

The invention describes an isolated PRO (secreted and transmembrane)

polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are

cuseful for stimulating the proliferation of or gene expression in

periotyce cella. PRO357, PRO222, PRO1272 or PRO4405 polypeptide are useful

cor stimulating the proliferation or differantiation of chondrocyte

cells. PRO357, PRO525, PRO125, PRO1306 or PRO1419 polypeptide

are useful for stimulating the release of tumour necrosis factor (TMF)-

cells. PRO337, PRO526, PRO357, PRO1306, PRO1419, PRO1419,

One hundred and twenty two nucleic acids encoding PRO polypeptides, useful in gene therapy, or for preparing a medicament for treating a condition that is responsive to the PRO polypeptide or anti-PRO antibody, e.g. cancer.

Claim 11; Fig 78; 314pp; English.

The invention describes an isolated PRO (secreted and transmembrane)

polypeptide (1) PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are
useful for stimilating the proliferation of or gene expression in
pericyte cells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are useful
for stimulating the proliferation or differentiation of chondrocyte
cells. PRO357, PRO525, PRO1185, PRO136 or PRO1419 polypeptide
cells. PRO357, PRO525, PRO1185, PRO1366 or PRO1419 polypeptide
cells. PRO3317, PRO5256, PRO357, PRO1366, PRO1419, PRO214,
PRO147, PRO317, PRO5256, PRO357, PRO1306, PRO1419, PRO1419,
PRO147, PRO3137, PRO5256, PRO363, PRO1927, PRO1344, PRO1309,
PRO1478, PRO1184, PRO1126, PRO1196, PRO1192, PRO1244, PRO1319,
PRO1349, PRO1376, PRO1367, PRO1309, PRO1474, PRO13197, PRO1341, PRO1367,
PRO1845, PRO1376, PRO1387, PRO1409, PRO1474, PRO1341, PRO1567,
PRO1849, PRO6079, PRO9846 or PRO10096 polypeptide are useful for
ctimulating the proliferation of normal human dermal fibroblasts cells.
PRO5723, PRO5725, PRO7154, or PRO7425 polypeptide are useful for

PRO1274, PRO1412, PRO1340, PRO1338, PRO1760, PRO1567,

contributing the proliferation of normal human dermal fibroblast cells. PRO inhibiting the proliferation of normal human dermal fibroblast cells. PRO collypeptides such as PRO6604, PRO4811, PRO7174, PRO5778, PRO4332, etc., are useful for detecting the presence of tumour in a mammal which comparing the level of expression of the above PRO polypeptides in a test sample of cells taken from the mammal, and a control sample of commal cells of the same cell type, where a higher level of expression of the PRO polypeptides in the test sample as compared to the control sample of in a indicative of the presence of tumour in the mammal. The tumour is lung is indicative of the presence of tumour in the mammal. The tumour or tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or typing, or as therapeutic agents. A polynucleotide (II) encoding (I) is useful as molecular weight markers, for tissue useful transpendic animals or knock-out animals which are useful cor chromosome and gene mapping or gene therapy. (II) is useful cor chromosome and gene mapping or gene therapy. (II) is useful cor succession of server animals which are useful secreting broads. PRO357, PRO229, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, export injuries).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                60 LEIREDGIVGGAADQSPESILQLKALKPGVIQILGVKTSRFLCQRPDGALYGSLHFDPEA 119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               121 CSFRELLLEDGYNVYQSEAHGLPLHLPGNKSPHRDPAPRGPARFLPLPGLPPALPEPPGI 180

PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are useful for stimulating the proliferation of or gene expression in pericyce cells. PRO327, PRO229, PRO1272 or PRO4405 polypeptide are useful for stimulating the proliferation or differentiation of chondrocyte cells. PRO331, PRO357, PRO125, PRO136 or PRO1419 polypeptide are useful for stimulating the release of tumour necrosis factor (TNF)-alpha from human blood. PRO982, PRO357, PRO725, PRO1306, PRO1419, PRO214, PRO317, PRO337, PRO5214, PRO1134, PRO826, PRO1005, PRO809, PRO1071, PRO1411, PRO1309,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated PRO polypeptide useful for tissue typing, gene therapy, as molecular weight markers, for treating arthritis and tumor.

cuseful for stimulating the proliferation of or gene expression in useful for stimulating the proliferation of or gene expression in cuseful for stimulating the proliferation of or gene expression in periotyte cells. PR0257, PR0229, PR02120 or PR04405 polypeptide are useful for stimulating the proliferation or differentiation of chondrocyte cells. PR0231, PR0357, PR0155, PR0155, PR0156, PR01419 polypeptide are useful for stimulating the release of tumour necrosis factor [TNF) cape a pr0241, PR0337, PR0526, PR0363, PR0357, PR0725, PR01306, PR01419, PR0214, PR01413, PR0256, PR0186, PR01134, PR0826, PR01805, PR0181, PR0181, PR0181, PR01307, PR013 tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polynucleotide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO157, PRO229, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are sport injuries). This is the a transmembrane PRO polypeptide.

Ş

Novel human secreted and transmembrane protein PRO10196.

Human, secreted and transmembrane protein, PRO; cytostatic; vulnerary; antiarthritic, pericyte cell proliferation; pericyte cell differentiation; chondrocyte cell proliferation; chondrocyte cell differentiation; tumour necrosis factor alpha release; (TNF)-alpha release; dermal fibroblast cell proliferation;

The invention describes an isolated pro (secreted and trainsmenorarie)

CC polypoptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypoptide are useful for stimulating the proliferation of or gene expression in useful for stimulating the proliferation of or gene expression in constitution the proliferation of construction of chondrocyte for stimulating the proliferation or differentiation of chondrocyte calls. PRO313, PRO357, PRO1155, PRO1306 or PRO1419 polypeptide are useful for stimulating the release of tummour necrosis factor (TRF)-calpha from human blood. PRO982, PRO337, PRO523, PRO1306, PRO1419, PRO1419, PRO214, PRO1314, PRO1313, PRO337, PRO523, PRO188, PRO1126, PRO1186, PRO1192, PRO1414, PRO1309, PRO1347, PRO1365, PRO1186, PRO1186, PRO1192, PRO144, PRO1314, PRO1309, PRO1343, PRO1343, PRO1343, PRO1344, PRO1344, PRO1356, PRO1343, PRO1343, PRO1343, PRO1344, PRO1356, PRO1343, PRO1343, PRO1344, PRO1356, PRO9409, PRO New isolated nucleic acid encoding a secreted and transmembrane polypeptide (PRO), for use in recombinantly producing a PRO polypeptide, as a hybridization probe, and in gene therapy. Goddard A, Godowski PJ; phan JF, Watanabe CK, Wood WI; tumour; The invention describes an isolated PRO (secreted and transmembrane) dermal fibroblast cell differentiation inhibitor; tumour; lung colon tumour; breast tumour; prostate tumour; rectal tumour; liver tumour; tissue typing; chromosome mapping; gene mapping; Gerritsen ME, Goddard Smith V, Stephan JF, Claim 11; Fig 78; 308pp; English. 01-JUN-2001; 2001WO-US017800. 29-JUN-2001; 2001WO-US021066. 09-APR-2002; 2002US-00119480. 13-AUG-2002; 2002US-00219070. tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polyamucleotide (II) encoding (I) is useful tor chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO252, PRO1572 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and transmembrane PRO polypeptide. is indicative of the presence of tumour in the mammal.

```
The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polynucleotides encoding them.

The PRO polypeptides and polynucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TMP)-alpha from human blood, for stimulating the proliferation of or gene chondrocyte cells, for stimulating the proliferation of or gene chordrocyte cells, for stimulating the proliferation of or gene chordrocyte cells, for stimulating the proliferation of or gene chordrocy in operacyte cells or for stimulating the proliferation of or gene normal human dermal fibroblasts. The PRO nucleic acids are useful as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO polypeptides by recombinant technology, in generating transgenic animals or knock-out animals which may be used in the development and screening of therapeutically useful reagents, in gene therapy, in chromosome identification, as chromosome antibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies, are useful for preparing an edicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies, are useful for preparing and prome and/or cartiage and antibodies, and an anti-PRO second tumours and home and/or cartiage antibage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      disorders (e.g. arthritis, sports injuries), involving inducing the redifferentiation of chondrocytes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel isolated PRO polypeptide useful for tissue typing, as molecular weight markers in protein electrophoresis, for treating arthritis, tumor.
                                                                                                                                                                                                                                                                                                                                                                                        Gerritsen ME, Goddard A, Godowski P

ĸ New secreted and transmembrane PRO polypeptide useful for preparing medicament for treating a condition that is responsive to the PRO polypeptide or anti-PRO antibody, e.g. cancer.

Claim 11; SEQ ID NO 78; 314pp; English.

LITE ALWEATHON UNDOINED AND INCLORED AND INCOMENTATION OF DEPROPED AND INCOMENTATION OF DEPROPED AND INCOMENTATION OF OF PROBISO DIVIDEDTICE ARE USEFUL for stimulating the proliferation of or gene expression in pericyte cells. PRO357, PRO1259, PRO1350 or PRO4405 polypeptide are useful for stimulating the proliferation of differentiation of chondrocyte cells. PRO357, PRO725, PRO1306 or PRO1419 polypeptide are useful for stimulating the release of tumour necrossis factor (TMP)-calpus from human blood. PRO982, PRO357, PRO1305, PRO1306, PRO1419, PRO1419, PRO1419, PRO1419, PRO1414, PRO1419, PRO1419, PRO1419, PRO1419, PRO1419, PRO1419, PRO1419, PRO1419, PRO1419, PRO1414, PRO1419, PRO1 The invention describes an isolated PRO (secreted and transmembrane)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polynucleotides encoding them. The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosenose or bioreactors. They are particularly useful for diagnostics, biosenose or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TMP)-alpha from human lood, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells or for stimulating the proliferation of or gene concal human dermal fibrollasts. The PRO nucleic acids are useful as normal human dermal fibrollasts. The PRO nucleic acids are useful as thyridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO polypeptides by recombinant technology, in generating transgenic animals or knock-out animals which

may be used in the development and screening of therapeutically useful reagents, in gene therapy, in chromosome identification, as chromosome markers and in generating probes. The PRO polypeptides, or anti-PRO antibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sporte injuries), involving inducing the redifferentiation of chondrocytes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CSFRELLIEDGYNVYQSEAHGLPLHLPGNKSPHRDPAPRGPARFLPLPGLPPALPEPPGI 180

Novel isolated PRO polypeptide useful for tissue typing, gene therapy, as molecular weight markers, for treating arthritis, tumor.

Claim 11; Fig 78; 308pp; English.

The invention describes an isolated PRO (secreted and transmembrane)

CD polypeptide (I). PR0982, PR01160, PR01187 or PR01129 polypeptide are polypeptide for stimulating the proliferation of or gene expression in pericyte cells. PR0357, PR0229, PR01272 or PR04405 polypeptide are useful for stimulating the proliferation of differentiation of chondrocyte cells. PR0357, PR0725, PR01155, PR01196 or PR01419 polypeptide are useful for stimulating the proliferation or differentiation of chondrocyte cells. PR0357, PR0982, PR0357, PR0725, PR01306 or PR04419 polypeptide are useful for stimulating the release of tumour necrosis factor (TNF)-cap br0337, PR0526, PR0363, PR0353, PR01255, PR01306, PR01347, PR0337, PR0356, PR01348, PR01349, PR01369, PR01344, PR01369, PR01349, PR01369, PR01344, PR01369, PR01344, PR01369, PR01344, PR01369, PR01387, PR01305, PR01379, PR01305, PR01379, PR01305, PR01379, PR01306, PR01379, PR0137 tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polynucleotide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO229, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and transmembrane PRO polypeptide

                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polypuble encoding them.

Transmembrane polypeptides and polypublecetides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours fe.g. humg tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TMF)-alpha from human blood, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the proliferation of or gene capression in pericyte cells or for stimulating the proliferation of or gene or probes, in chromosome and gene mapping, in generating are useful as hybridisation probes, in chromosome and gene mapping, in generating transgenic animals or knock-out animals which technology, in generating transgenic animals or knock-out animals which can be used in the development and screening of therapy in generating probes. The PRO polypeptides, or anti-PRO antibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the re-

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polypuclectides encoding them.

The PRO polypeptides and polymuclectides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, prestate tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TMP) alpha from human blood, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the proliferation of or gene comman in periotyte cells or for stimulating the proliferation of normal human dermal fibroblasts. The PRO mucleic acide are useful as hybridisation probes, in chromosome and gene mapping, in generating transgenic animals or knock-out animals which may be used in the development and screening of therapeutically useful reagents, in generating probes. The PRO polypeptides by recombinant reagents, in generating probes. The PRO polypeptides or anti-PRO antibodies, are useful for preparing a medicament for treating a metical prodes, and in the development and screening of therapeutically useful as markers and in generating probes. The PRO polypeptides or anti-PRO antibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies and in the development and servents and shows and for cartilates. Ϊ, antibodies, such as periorte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the redifferentiation of chondrocytes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptide of the invention. 60 LEIREDGTVGGAADQSPESLLQLKALKPGVIQILGVKTSRFLCQRPDGALYGSLHFDPEA 119 CSFRELLLEDGYNVYQSEAHGLPLHLPGNKSPHRDPAPRGPARFLPLPGLPPALPEPPGI 180 LEIREDGTVGGAADQSPESLLQLKALKPGVIQILGVKTSRFLCQRPDGALYGSLHFDPEA 120 59 or as 1 MDSDETGFEHSGLWYSVLAG-LLGACQAHPIPDSSPLLQFGGQVRQRYLYTDDAQQTEAH MDSDETGFEHSGLWVSVLAGLLLGACQAHPIPDSSPLLQFGGQVRQRYLYTDDAQQTEAH Gaps One hundred and twenty two nucleic acids encoding PRO polypeptides, useful in gene therapy, chromosome identification, tissue typing, o hybridization probes in chromosome and gene mapping. ٦: Score 1098.5; DB 7; Length 208; Pred. The PRO polypucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, prostate tumour, rectail tumour or liver tumour) in anammal, for stimulating the release of tumour necrois factor (TMF)-alpha from human blood, for stimulating the proliferation or differentiation of corporation in pericyte cells for stimulating the proliferation of or gene cormal human dermal fibroblasts. The PRO nucleic acids are useful as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO polypeptides by recombinant technology, in generating transgenic animals or knock-out animals which manner in the properties of the proliferation of the p

Novel human secreted and transmembrane protein PRO10196 ADB78297 standard; protein; 208 (first entry) 04-DEC-2003 ADB78297; RESULT 24

Ž

Human, secreted and transmembrane protein; PRO; cytostatic; vulnerary; antiarthritic; pericyte cell proliferation; pericyte cell differentiation; chondrocyte cell differentiation; tumour necroais factor alpha release; (TNF)-alpha release; dermal fibroblast cell proliferation; dermal fibroblast cell proliferation; clond fibroblast cell differentiation inhibitor; tumour; lung tumour; colon tumour; breast tumour; prostate tumour; rectal tumour; lissue typing; chromosome mapping; gene mapping; gene therapy

The invention describes an isolated kWO (Secreted and Ladismenorally polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are useful for stimulating the proliferation of or gene expression in the stimulating the proliferation of or gene expression in the proliferation of defect of chandrocyte cells. PRO357, PRO225, PRO1152 or PRO4405 polypeptide are useful contained the proliferation of defect of chandrocyte calls. PRO31, PRO357, PRO1155, PRO1306 or PRO1419 polypeptide are useful for stimulating the release of tumour necrosis factor (TMF)-calpha from human blood. PRO982, PRO1357, PRO1305, PRO1419, PRO1419, PRO1317, PRO1307, PRO1419, PRO1419, PRO1134, PRO1862, PRO1008, PRO1009, PRO1407, PRO1419, PRO1134, PRO1367, PRO1136, PRO1136, PRO1136, PRO1136, PRO1136, PRO1136, PRO1136, PRO1136, PRO1376, PRO1376, PRO1376, PRO1376, PRO1376, PRO1376, PRO1376, PRO1376, PRO1376, PRO1378, PRO1376, PRO1378, PRO1376, PRO1378, PRO1378 for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO229, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour. (1) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polynucleotide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful Wood WI; New isolated PRO polypeptide useful for tissue typing, gene therapy, a molecular weight markers in protein electrophoresis, and for treating the invention describes an isolated PRO (secreted and transmembrane) Godowski PJ; Goddard A, Gouc,...

Claim 11; Fig 78; 315pp; English

```
invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating a tumour in a mammal. In addition, they may be useful for measuring or detecting the expression of a tumour associated gene. The present sequence is the amino acid sequence of a human PRO protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             119

The present invention describes a method for the reduction of mortality and morbidity in critically ill patients, which involves the administration of fibroblast growth factor 21 (FGF-21) (1). (1) has antiinflammatory, respiratory, antibacterial, immunosuppressive, vascropic, heamostatic and nephrotopic activities, and can be used as a correction of regulator, a glucose uptake stimulator, and an insulin glucose level regulator, and some insulin gensitivity enhancer. (1) can be used in the manufacture of a medicament for the reduction of morbidity and mortality in critically ill patients suffering from systemic inflammatory response syndrome (SIRS), respiratory distress, acute lung injury, acute respiratory distress syndrome, multiple organ dysfunction syndrome, sepsis and chronic proncive pulmonary disease (e.g. emphysems and chronic broncities pulmonary disease (e.g. emphysems and chronic broncibles pancreatitis, ischaemia, multiple trauma and tissue injury, haemorrhagic shock, immune-mediated organ injury, shock and renal callure. FGF-12 regulates glucose levels in response to sepsis; reduces morbidity and mortality that occurs in critically ill patients; and stimulates glucose uptake and enhances insulin sensitivity. The present sequence represents the human FGF-21 amino acid sequence, which is given in the exemplification of the present invention.
Use of fibroblast growth factor 21 for reduction of mortality and morbidity in patients suffering from e.g. systemic inflammatory response syndrome and acute respiratory distress syndrome.
                                                                                                                                                                                                                                                               Disclosure; Page 15-16; 22pp; English.

This invention relates to one hundred and twenty two novel nucleic acids encoding human PRO membrane bound proteins or receptors. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular organisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information received from other cells and the immediate printenance. The information is offern transmitted by secreted printenance. The information is offern transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor liquand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins, along with the cDNA sequences encoding them. The novel proteins of the
                                                                                                                                                                                                                                                    One hundred and twenty two nucleic acids encoding PRO polypeptides, useful for the manufacture of a medicament for diagnosing or treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 11; Fig 78; 315pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel isolated PRO protein encoding nucleic acid. The nucleic acid of the invention may be useful for preparing PRO polypeptides and anti-TRO antibodies for detecting the presence of a useful in a mammal. Furthermore, the molecules of the invention may be useful for stimulating proliferation or gene expression in pericyte cells, the release of tumour necrosis factor (TNF)-alpha from human blood, the proliferation or differentiation of chordrocyte cells and for inhibiting the proliferation of normal human dermal fibroblast cells. Finally, the molecules may be utilised during gene therapy. The current sequence is that of the human PRO protein of the invention
                                                                                                                                                                                                                                                                                                     A, Godowski PJ;

The invention relates to an isolated mucleic acid encoding a PRO polypeptide. Nucleic acids that encode PRO can be used to generate either transgenic animals or knock-out animals useful in developing and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy for replacing defective gene, in chromosome identification, as chromosome markers, or in generating probes to isolate in lull length PRO cDNA. The PRO polypeptides are useful for chondrocyte stimulation, TNF-alpha stimulation, human dermal fibroblasts stimulation and for detecting the presence of tumour in an mammal. The PRO polypeptides are useful is an electrophoresis and the isolated nucleic acids may be used for protein electrophoresis and the isolated nucleic acids may be used for recombinantly expressing those markers. The PRO polypeptides are useful in diagnostic assays for protein electrophoresis and the infinity purification of PRO from recombinant cell culture or patural sources. The present sequence represents the amino acid sequence of a human secreted/transmembrane PRO polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ۲,

                                                                                                                                                                                                                                                                          The present sequence represents human fibroblast growth factor 21 (FGP-21). FGF-21 is located to chromosome 19, more specifically to 19q13.1-qter. The present invention describes a method for treating a mammal exhibiting type 2 diabetes or type 1 diabetes, or treating a mammal comprising FGF-21 which has at least 95% amino acid sequence identity to the 20% amino acid sequence given in ABP96156. Also described: (1) inducing an increase in glucose uptake in adipocyte cells by administering FGF-21 to induce an increase in glucose uptake; and (2) administering FGF-21 to induce an increase in glucose uptake; and (2) administering a medicament for treating type 1 diabetes, type 2 diabetes or obesity in a mammal using FGF-21 has antidiabetic and anorectic activities. The method is useful for treating a mammal exhibiting type 2 or 1 diabetes or for treating a mammal exhibiting type 2 or 1 diabetes or for treating a mammal for obesity. The method is preferably useful for treating thumans exhibiting type 1 or type 2 diabetes, and for treating domestic animals for obesity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               7

The invention relates to a novel isolated nucleic acid encoding a fully defined PRO polypeptide. The molecules of the invention may be useful for stimulating proliferation or gene expression in pericyte cells or the release of TMF-alpha from human blood. Other possible uses include the stimulation or inhibition of chondrocyte proliferation or differentiation, the stimulation of human dernal fibroblast cell proliferation and the detection of the presence of a tunnur within a mammal. Furthermore, the nucleic acid may be useful for the manufacture of a medicament for diagnosing or treating a tumour within a mammal or to measuring or detecting the expression of an associated gene, as well as during gene therapy. The current sequence is that of the human PRO protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CSFRELLLEDGINVYOSEAHGLPLHLPGNKSPHRDPAPRGPARFLPLPGLPPALPEPPG1 179

ndureottue sequences. The rate purpoperates or bioteractors are detected as pharmaceuticals, diagnostics, blosensors or bioteractors. These are particularly useful for detecting tumnour fee.g. lung tumnour, colon tumnour, becast tumnour, prostate tumnour, rectal tumnour, or liver tumnour) in a mammal, for slimulating the release of TNF-alpha from human blood, for stimulating proliferation or differentiation of chondrocyte cells, for stimulating proliferation. The PRO mucleic acid or normal human dermal fibroblast proliferation. The PRO mucleic acid or polypeptide is also useful for treating tumnours or various bone and/or artilage disorders (e.g. sports injunies or arthritis), or wounds. The PRO polypeptides are useful in drug screening, particularly as targets for therapeutic intervention in these diseases, and in the diagnostic determination of the presence of these diseases. The PRO polypeptides are also useful as molecular weight markers, or for chromosome identification. The PRO genes are useful as hybridisation probes, or for screening libraries of human cDNA, genomic DNA or mRNA. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. This is the amino acid sequence of a novel human secreted and transmembrane PRO polypeptide
122 PRO (secreted and transmembrane) polypeptides whose sequences are fully defined in the specification; or (b) any of 122 nucleotide sequences having e.g. 4814, 2504 or 1759 bp fully defined in the specification; or the full length coding sequence of any these 122 nucleotide sequences. The PRO polypeptides or polynucleotides are useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 MDSDETGFEHSGLWVSVLAG-LLGACQAHPIPDSSPLLQFGGQVRQRYLYTDDAQQTEAH 59
                                                                                                                                                                                                                                                                                                                                                                                   The invention describes one hundred and eighty seven nucleic acids encoding novel human secreted and transmembrane (PRO) polypeptides. The PRO nucleic acids, polypeptides, agonists and antagonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, agerelated macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO nucleic acids have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. This is the amino acid sequence of a novel human secreted and transmembrane PRO polypeptide
                                                                                                                                    Godowski PJ;

The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides and polynuclectides are useful for preparing a medicament useful in the diagnosis and treatment of tumours. Anti-PRO antibodies are useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. ABU80739-ABU80800 represent the human PRO polypeptides of the invention. Note: The sequence

The present invention relates to new extracellular messenger polypeptides and polymucleotides encoding them. XMES is useful in the diagnosis, treatment and prevention of neurological laceful in the diagnosis, stroke, or Alzheimer's disease), autoimmune/inflammatory disorders (e.g. acquired immune deficiency syndrome, AIDS, Addison's disease, or allergies), developmental disorders (e.g. renal tubular acidosis, anaemia or Cushing's syndrome, and cell growing tractions, and aneurysm or vascular malformation), and cell proliferative disorders (e.g. cancer), and in the assessment of the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of extracellular messengers. XMES may also be used in the treatment of viral, bacterial, fungal, parasitic, protozoal and helminthic infections, trauma, disorders associated with hypopitultarism, hypothyroidism or genadal steroid hormones, and man
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Alzheimer's disease; autoimmune disorder; renal tubular acidosis; stroke; acquired immune deficiency syndrome; AIDS; Addison's disease; cytostatic; developmental disorder; anaemia; Cushing's syndrome; endocrine disorder; vascular malformation, cell profiferative disorder; gene therapy; cancer; heuroprotective; trauma; hypopituitarism; hypothyroidism; antihelminthic; hyperthyroidism; gonadal steroid hormone; pancreatic disorder; nootropic; diabetes mellitus; immunosuppressive, anti-inflammatory; antibacterial; antiviral; antifungal; protozoal; allergy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated human polypeptide (1) for zFGF11 (a fibroblast growth factor), and the encoding polymucleotide (II). (I) and (II) are used in methods of the invention stimulating proliferation of mesenchymal cells, detecting the presence of zFGF11 in a biological sample, detecting the presence of FGFRIIC in a biological sample and stimulating proliferation of osteoblastic lineage cells. The polypeptides, nucleic acid and/or antibodies of the invention may be used in treatment of despenaration, anyotrophic lateral sclerosis, cerebrovascular stroke, neuropathy associated with diabetes mellitus, neural cell development or despenaration, anyotrophic lateral sclerosis, cerebrovascular stroke, neuropathy associated with lack of maintenance of neuronal development. Molecules of the nervous system or lack of neuronal development. Molecules of the invention may also be useful for improving cardiac function and for promoting wound healing of the epidermis. The present sequence represents the amino acid sequence of
                                                                                                                             Human; fibroblast growth factor; FGF; zFGF11; mesenchymal cell; FGFRIIIC; osteoblastic lineage cell; diabetes mellitus; neuropathy; neural cell development, amyotrophic lateral scherosis; cerebrovascular stroke; neuronal differentiation; congenital disorder; nervous system disorder; cardiac function; wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                            28. .208 _____/note= "Mature fibroblast growth factor homologue, zFGFI1. This sequence is specifically claimed in claim 4"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 LEIREDGIVGGAADQSPESLLQLKALKPGVIQILGVKTSRFLCQRPDGALYGSLHFDPEA 119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

mellitus, neural cell development or degeneration, amyotrophic lateral sclarosis, cerebrovascular stroke, neuropathy associated with lack of maintenance of neuronal differentiation and congenital disorders of the nervous system or lack of neuronal development, promoting angiogenesis and wound healing, for revascularisation in eye, complications related to poor circulation such as diabetic food ulcers improving cardiac function, modulating surfactant production in the lung epithelium, to reduce damage to the tissue caused by ischaemia or ischaemia-reperfusion events, particularly in the heart or brain and for inducing skeletal muscle neogenesis and/or hyperplasia, kidney regeneration and/or for treating of systemic and pulmonary hypertension. Antagonists of 2FGF11 are useful for inhibiting disorders associated with kidney epithelium such as glomerulonephritis
                                                                                                                                                                                                                                                                                                                                                                                        LEIREDGTVGGAADQSPESLLQLKALKPGVIQILGVKTSRFLCQRPDGALYGSLHFDPEA 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CSFREILLEDGYNVYOSEAHGLPLHLPGNKSPHRDPAPRGPARFLPLPGLPPALPEPPGI 179
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to one hundred and twenty two nucleic acids encodeding PRO polypeptides. The sequences of the 122 PRO polymucleotides encode human secreted proteins. The PRO nucleic acids, polypeptides, agonists and antagonists are useful for nucleic acids, polypeptides. The PRO polypeptides are useful for diagnosing tumours, especially lung cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or liver tumour. The PRO polypeptides are useful for stimulating the proliferation of, or gene expression, in pericyte cells, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating stimulating the release of tumour necrosis factor-alpha from human blood, for stimulating or inhibiting the proliferation of normal human dermal fibroblast cells. The PRO polypeptide may also be used as molecular weight markers and for tissue typing. The PRO nucleic acids have

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                      Human; sbgFGF-19a; fibroblast growth factor; stroke; cancer; psoriasis; traumatic brain injury; cerebral ischemia; atherosclerosis; rhenmatic draftritis; cirrhosis; sarroidosis; wound repair; idiopathic pulmonary fibrosis; tumour development; vaccine developmental disorder; skeletal disorder; acrocephaly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a human shgFGF-19a polypeptide. The polypeptide is a member of fibroblast growth factor family of polypeptides. The polymucleotides and polypeptides are useful in the treatment of diseases such as stroke, traumatic brain injury, cerebral ischemia, cancer, atherosclerosis, rheumatoid arthritis, cirrhosis, psoriasis, sarcoidosis, idiopathic pulmonary fibrosis, tumour developmental disorders, skeletal disorders, wound repair, and acrocephaly. They are also useful as vaccines for inducing an immunological response in a mammal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    LEIREDGTVGGAADQSPESLLQLXALXPGVIQILGVXTSRFLCQRPDGALYGSLHFDPEA

The present sequence is that of human JAFFA, a novel member of the fibroblast growth factor family. Analysis of rare sequences in the Milennium datebase led to the identification of an expressed sequence tag from a buman prostate tumour library which coded for a novel hypothetical signal peptide. Further analysis led to the identification of JAFFA, The invention provides JAFFA polypeptides, polymolecides and anti-JAFFA antibodies. It also provides antisense nucleic acid molecules, recombinant expression vectors, host cells and transgenic animals. JAFFA proteins may be useful for developing novel diagnostic and therapeutic proteins may be useful for developing novel diagnostic and therapeutic agents for JAFFA-associated disorders such as cancers and other disorders which demonstrate ABO(H) blood group disorders and for controlling cellular proliferative and/or differentiative disorders. The JAFFA call in may be used to treat and/or diagnose a variety of immune disorders such as autoimmune disease and multiple sclerosis. The proteins may also be used to screen for naturally occurring JAFFA substrates, to screen for drugs or compounds which modulate JAFFA antibodies, which can be used to detect and isolate JAFFA proteins, regulate the bioavailability of JAFFA proteins and modulate JAFFA activity.
                                                                                                                                                                                                                    Isolated JAFFA nucleic acid molecules which encode novel fibroblast growth factor family members (JAFFA) are useful for developing novel diagnostic and therapeutic agents for JAFFA-associated disorders such as
                                                                                                                                                                                                                                                                                                                                                      Claim 2; Fig 1; 137pp; English.

The sequence represents a fibroblast growth factor-like (FGF-like)

polypeptide. FGF-like protein and its associated nucleic acid play a role
in modulating body growth, maturation or life-span. They are also useful
for treating, preventing or ameliotating disorders such as cirrhosis,
inflammatory bowel disease, mucositis, Crohn's disease, diabetes,
obseity, gastrointestinal abnormalities, neurodegenerative diseases,
damage to renal tubules as a result of acute tubular necrosis,
haematopoietic cell reconstitution following chemotherapy, wasting
syndromes (e.g., cancer associated cacheria), damage to che corneal
cpithelium, lens or retinal tissue, multiple sclerosis, myopathies, short
steture, delayed maturation, excessive growth (e.g. acromegaly),
cremature maturation, alopecia, abnormalities of androgen target organs,
bronchopulmonary dysplasia, acute respiratory distress syndrome,
cof the eye or other tissues, atherosclerosis, hypercholesterolemia,

The invention relates to fibroblast growth factor (FGF)-like polypeptides and nucleic acid molecules encoding such polypeptides. Sequences of the invention are useful for treating, preventing or ameliorating a medical condition. They are useful for treating dermal wounds, epidermolysis, bullosa, male pattern alopecia, gastric ulcer, duodenal ulcer, erosive condition. They are useful for treating dermal wounds, epidermolysis, bullosa, male pattern alopecia, gastric ulcer, duodenal ulcer, erosive consorpatilis, oseophageia reflux disease, inflammatory bowel disease, con a gastritis, oseophageia reflux disease, inflammatory bowel control to to insured gut to train the pattern applysema, pulmonary inflammation, pulmonary fibrosis, chepatic cirrhosis, toxic insults to the liver, fulminant liver failure, viral hepatitis, mucositis, multiple sclerosis and other cremochopulmonary dysplasia, acute respiratory distress syndrome or other conchopulmonary dysplasia, acute respiratory distress syndrome or chercond propresentation of neuronal cells, promoting constant lines, tumours of the eye or the other tissues and organs. CFG FGF-like polypeptides are useful stimulating andiogenesis, promoting or wound healing, modulating differentiation of neuronal cells, adipocytes and skeletal muscle cells, preventing or ameliorate skin aging, convenenting hair loss, stimulating encound and differentiation of neuronal cells, and bone marrow cells and maintaining organs before transplantation and for supporting cultures of primary cells and tissues. Sequences of the invention are also used in gene therapy and as vaccines.
